

PASSIVE DEFENSE · CRITICAL INFRASTRUCTURE · NATIONAL RESILIENCE · NATO ALIGNMENT

Europe Is Rearming. The Passive Defense Layer Is Still Missing.

Europe is accelerating active defense readiness at unprecedented pace. But active defense without passive defense leaves buildings, infrastructure, and civilian populations physically exposed. Fortline delivers structural hardening of new and existing buildings against missile and drone strikes, blast, and unconventional threats - backed by 35+ years of live operational experience in Israel.

2% - 5%

NATO defense spending surge - fastest rearmament since Cold War, but passive defense lags behind

Missiles + Drones

Ballistic missiles, cruise missiles and drone swarms now demonstrated threats on European soil

0 Buildings

Most European government, critical infrastructure and public buildings have no physical blast or impact protection

THE GAP EUROPE MUST CLOSE

Active defense intercepts threats in the air. Passive defense is what protects the building when the system fails - or is overwhelmed.

Missile and drone strikes are no longer a distant risk for Europe. Government buildings, power facilities, hospitals, data centers, and civilian infrastructure have no physical protection against direct impact, blast overpressure, or structural collapse. Fortline hardens these buildings from within - new construction and existing structures alike - without demolition, without permits, deployed in days.

WHAT WE DELIVER

01 Protection Assessment & Advisory

On-site engineering surveys, missile and drone threat mapping, structural vulnerability analysis - classified Protection Vulnerability Report under NDA.

02 Physical Building Hardening - New & Existing Structures

PATENTED TECHNOLOGY

A patented super-polymer creating a dense nanometric network, bonding with and reinforcing walls from within. Protects against missile impact, blast overpressure, drone strikes, and chemical threats. Applied at design stage or retrofitted - no demolition, no permits, deployed in days.

03 Population Preparedness (GEM)

Crisis communication, staff training, community drills, and inter-agency coordination - building human resilience at every level.

04 National Regulatory Framework

Civil defense legislation advisory, building code adaptation, and a 6-pillar resilience strategy modelled on Israeli Standard 4422/4577.

PRIORITY SECTORS - EUROPE

GOVERNMENT

Public & Defense Infrastructure

Ministries · NATO facilities · Command centers · Border infrastructure

CRITICAL

Energy, Telecom & Water

Power grids · Gas pipelines · Data centers · Water treatment

EASTERN FLANK

Priority Nations

Poland · Estonia · Latvia · Lithuania · Finland · Romania

PUBLIC

Hospitals & Essential Services

Hospitals · Schools · Transport hubs · Emergency services

OUR METHODOLOGY

01

Assess

On-site engineering surveys and threat-environment mapping - establishing a full baseline before any recommendation is made.

02

Recommend

Facility-by-facility hardening plan, preparedness program design, and a national regulatory roadmap - scoped and costed.

03

Implement

Physical hardening under Israeli engineering supervision with local contractor knowledge transfer - building permanent sovereign capability.

WHY ISRAELI DOCTRINE

No nation has built civilian resilience under a more sustained, complex, multi-vector threat environment. Israel's doctrine was forged under operational conditions and is directly transferable to Europe's current security reality.

- 1991 - Scud doctrine encoded into national law
- 2006-2023 - 8,000+ rockets, multi-front campaigns
- 2023 - Simultaneous threats: Iran, Lebanon, Gaza, Yemen
- Directly applicable to NATO's eastern flank threat model

CREDENTIALS

MOD / IDF

Israeli Ministry of Defense approved. IDF Home Front Command certified. The most rigorous civilian protection standard in the world.

PATENT

International patent on the super-polymer spray technology - nanometric bonding, no demolition, conventional and CBRN-rated protection.

PROVEN

Deployed in IDF bases, national telecom (Bezeq), hospitals, data centers, and government compounds under live conflict conditions.

TRACK

Bezeq National Telecom, Laniado Hospital, Tashan Energy, IDF facilities, and government compounds nationwide.

35+

Years Active Threat Experience

MOD

Ministry of Defense Approved

IDF

Home Front Command Certified

CBRN

Chemical Threat Protection Rated

First step: a [confidential protection assessment](#) of priority facilities - no commitment required.
We survey, map threats, and deliver a classified strategy under NDA. Available across Europe.
